

Table of Contents

Volume 1A

- Chapter 1: Crystal Growth Through the Ages: A historical Perspective
- Chapter 2: Phase Equilibria
- Chapter 3: Atomistic Calculation of Defect Thermodynamics in Crystalline Silicon
- Chapter 4: Stoichiometry of oxide crystal
- Chapter 5: Equilibrium shape of crystals
- Chapter 6: Rough–smooth transition of step and surface
- Chapter 7: Theory of nucleation
- Chapter 8: Growth Kinetics – basics of crystal growth mechanism
- Chapter 9: Structure of melt and liquid alloys
- Chapter 10 Monte Carlo Simulations of Crystal Growth
- Chapter 11: Ab initio–based approach to crystal growth: Chemical potential analysis
- Chapter 12: Simulation of epitaxial growth by means of density functional theory, kinetic Monte Carlo, and phase field methods
- Chapter 13: Controlled Colloidal Assembly: Experimental Modeling of Crystallization

Volume 1B

- Chapter 1: Morphological stability
- Chapter 2: Phase–field models
- Chapter 3: Dendritic Growth
- Chapter 4: Grain growth in the melt
- Chapter 5: Growth of semiconductor nanocrystals
- Chapter 6: Crystallization of Proteins
- Chapter 7: Biological Crystallization
- Chapter 8: Crystallization of Pharmaceutical Crystals
- Chapter 9: Crystallization of Chiral Molecules
- Chapter 10: In–situ observation of crystal growth by scanning electron microscopy
- Chapter 11: In–situ observation of crystal growth and flows by optical techniques
- Chapter 12: Snow and Ice Crystal Growth
- Chapter 13: Crystal Growth of Quasicrystals
