

Table of Contents

Volume 1A

Chapter 1: Crystal growth in geology Patterns on the rocks

Chapter 2: Czochralski growth of silicon crystals

Chapter 3: Liquid encapsulation and related technologies for the Czochralski growth of semiconductor compound

Chapter 4: Czochralski growth of oxides and fluorides

Chapter 5: Czochralski and flux growth of crystals for lasers and nonlinear optics

Chapter 6: Measures to grow bulk single crystals of transparent semiconducting and conducting oxides

Chapter 7: Floating zone growth of silicon

Chapter 8: Floating zone growth of oxides and metallic alloys

Chapter 9: Vertical Bridgman growth of binary compound semiconductor.

Chapter 10: Multi-crystalline silicon crystal growth for photovoltaic application

Chapter 11: The unidirectional crystallization of metals and alloys (turbine blades)

Chapter 12: Crystal growth by traveling heater method (THM)

Chapter 13: Growth of bulk nitrides from a Na flux

Chapter 14: Hydrothermal growth of crystals design and processing

Chapter 15: High-pressure high-temperature solution growth and ammonothermal synthesis of GaN crystals

Chapter 16: Vapor transport growth of wide bandgap materials

Chapter 17: Crystal growth of diamond

Chapter 18: Wafer processing

Volume 1B

Chapter 1: Capillarity and shape stability in crystal growth from the melt

Chapter 2: Heat transfer analysis and design for bulk crystal growth: Perspectives on the Bridgman method

Chapter 3: Fluid dynamics – modelling and analysis

Chapter 4: The role of Marangoni convection in crystal growth

Chapter 5: Flow control by magnetic fields during crystal growth from melt

Chapter 6: Oscillatory-driven fluid flow control during crystal growth from the melt

Chapter 7: Segregation and component distribution

Chapter 8: Thermal stress and dislocations in bulk crystal growth

Chapter 9: Defect generation and interaction during crystal growth

Chapter 10: Automation of crystal growth from melt

Chapter 11: Fundamentals of crystal growth from solutions

Chapter 12: Crystallization mechanisms of high-T_c superconductors

Chapter 13: Crystallization processes in gels

Chapter 14: Fundamentals of industrial mass crystallization
